SUMMARY

Frontend Developer with **5+ years of experience** building **enterprise HR platforms** serving 1,000+ users. Specialized in **React, Next.js, TypeScript, and micro-frontend architecture**. Experienced in owning features end-to-end — from planning and component design to delivery and iteration — within cross-functional Agile teams. Proficient in AI-assisted development tools (Cursor, GitHub Copilot, Claude) to improve workflow efficiency and code quality.

TECHNICAL SKILLS

- **Frontend:** React.js, Next.js, TypeScript, JavaScript (ES6+)
- **State Management:** Redux Toolkit / RTK Query, Redux, React Query, Zustand
- **Styling & UI:** Tailwind CSS, SCSS, Ant Design
- **Architecture & Practices:** Micro-frontend, Modular frontend, Agile / Scrum
- **Tooling:** Git, Vite, Webpack, Yarn, NPM, Cursor, Claude

PROFESSIONAL EXPERIENCE

Software Engineer (Frontend)

Terralogic LLC | Oct 2021 - Present | *Ho Chi Minh City, VietNam* | *Team size: 12-15*

HRMS – Human Resource Management System

A centralized enterprise platform automating HR operations — employee management, time tracking, leave requests, ticketing, and admin configuration — built on micro-frontend architecture.

- Dashboard Module

Feb 2025 - Present

- Built a centralized dashboard (social feed, weekly calendar, team overview) as the main entry point for all users.
- Developed a role-based social feed supporting post creation, likes, and comments with optimistic UI updates.
- Chose React Query over RTK Query for dashboard server state — independent cache scopes per widget prevent cross-contamination on refetch.
- Resolved slow initial load and excessive re-renders by lazy-loading federation remotes and memoizing list components — improving load time and reducing render cycles across concurrent widgets.

Tech: *Next.js, Tailwind CSS, React Query, Typescript.*

- Ticket Management

Oct 2024- Feb 2025

- Developed a full ticket management feature set — listing, filtering, status tracking, and role-based access — used by ~200+ internal staff for issue resolution.
- Implemented permission-based rendering — resolving each user's allowed actions (view/create/assign/close) from API permissions rather than hardcoded roles.

- Ensured consistent UI patterns across ticket modules, reducing cross-module QA cycles.

Tech: React.js, Tailwind CSS, React Query, Typescript.

- Timesheet Management

Jun 2024 - Oct 2024

- Built a time tracking module supporting daily and weekly project-based logs for ~300+ employees.
- Handled multi-field form states, validations, and data synchronization across concurrent sessions.
- Implemented CSV export and in-app notifications, improving reporting workflow for team leads..

Tech: React.js, Tailwind CSS, React Query.

- Admin Portal

Dec 2023 - Jun 2024

- Built an admin dashboard for system configuration and user management, serving ~50 core ops admins.
- Developed scalable table components with bulk action patterns — reused across 5+ admin sub-modules.
- Implemented permission-based access control aligned with backend role models.

Tech: React.js, Tailwind CSS, Redux Toolkit Query.

- Time Off Management

May 2022 - Dec 2023

- Developed leave request workflows handling ~500+ monthly requests across employee and manager roles.
- Built a multi-level approval flow (employee → manager → HR) — handling edge cases across conflicting leave policies.
- Automated leave balance calculations, replacing a previously manual process.

Tech: React.js, Ant Design, React Query

- Employee Management

Oct 2021 - May 2022

- Built a searchable employee directory with org chart support and profile management for 1,000+ records.
- Implemented role-based access control and advanced filtering across departments.
- Ensured responsive, consistent UI across desktop and mobile devices.

Tech: React.js, Tailwind CSS, Redux Toolkit Query.

ENGLISH SKILLS

Intermediate level. Capable of reading and writing technical documentation and communicating in cross-functional teams.

EDUCATION

Bachelor of Automation Engineering Technology

HCM University of Technology | 2013 – 2017.
