SUMMARY

Frontend Developer with 5+ years of experience building enterprise and SaaS web applications. Specialized in **React, Next.js, TypeScript, and scalable frontend architecture**. Experienced in building multi-tenant systems, performance-focused applications, and complex business workflows. Proficient in AI-assisted development workflows using **Claude and MCP** to improve engineering efficiency and code quality.

TECHNICAL SKILLS

- **Frontend:** React.js, Next.js, TypeScript, JavaScript (ES6+)
- **State & Data:** React Query, Redux Toolkit / RTK Query, Zustand, SWR
- **Styling & UI:** Tailwind CSS, SCSS, Ant Design, shadcn/ui
- **Architecture:** Micro-frontend, Multi-tenant SaaS, Modular Frontend
- **Performance:** Web Workers, Virtualization, Lazy Loading
- **Tooling:** Git, Vite, Webpack, Firebase, Yarn, NPM, Cursor, Claude, MCP

PROFESSIONAL EXPERIENCE

Web Developer

Finan | Mar 2026 – Present | *Ho Chi Minh City, Vietnam* | *Team size: ~20*

Multi-tenant SaaS Sales Management Platform

Developing SaaS solutions for sales operations and online commerce, including POS, inventory, cash flow, reporting, and merchant storefronts.

- Developed core features for POS, sales, inventory, cash flow, product management, and reporting on a multi-tenant SaaS platform.
- Built reusable UI components and leveraged React Query and Web Workers for efficient data handling and responsive user experiences.
- Developed and optimized a Next.js storefront platform for online sales, focusing on Core Web Vitals, rendering performance, and large product-list virtualization.
- Leveraged Claude + MCP workflows to improve development and testing efficiency.

Tech: React.js, Next.js, TypeScript, Tailwind CSS, Shadcn/ui, React Query, SWR, Web Workers.

Software Engineer (Frontend)

Terralogic LLC | Oct 2021 - Feb 2026 | *Ho Chi Minh City, VietNam* | *Team size: 12-15*

HRMS – Human Resource Management System

A centralized enterprise platform automating HR operations — employee management, time tracking, leave requests, ticketing, and admin configuration — built on micro-frontend architecture.

- Dashboard Module

Feb 2025 - Feb 2026

- Built a centralized dashboard with social feed, weekly calendar, and team overview using micro-frontend architecture.
 - Improved initial load and rendering performance through lazy-loaded federation remotes, bundle optimization, caching strategies, and component memoization.
-

- Ticket Management

Oct 2024 - Feb 2025

- Developed a full ticket management feature set — listing, filtering, status tracking, and role-based access — used by ~200+ internal staff for issue resolution.
 - Implemented permission-based rendering — resolving each user's allowed actions (view/create/assign/close) from API permissions rather than hardcoded roles.
-

- Admin Portal

Dec 2023 - Jun 2024

- Built an admin dashboard for system configuration and user management, serving ~50 core ops admins.
 - Developed scalable table components with bulk action patterns — reused across 5+ admin sub-modules.
 - Implemented permission-based access control aligned with backend role models.
-

- Core HR Modules

Oct 2021 - Dec 2023

- Developed leave management workflows handling 500+ monthly requests across employee and manager roles.
- Built multi-level approval workflows and automated leave balance calculations across complex leave policies.
- Developed employee directory and profile management supporting 1,000+ employee records with role-based access.
- Built project-based time tracking for 300+ employees, including validation, CSV export, and in-app notifications

Tech: React.js, TypeScript, Tailwind CSS, Ant Design, React Query, Redux Toolkit/RTK Query.

ENGLISH SKILLS

Intermediate level. Capable of reading and writing technical documentation and communicating in cross-functional teams.

EDUCATION

Bachelor of Automation Engineering Technology

HCM University of Technology | 2013 – 2017.
